## SUBJECT INDEX VOLUME 33, 1969

- Actinomycetes  
—sporulation and production of antibiotics, exoenzymes, and exotoxins, 48  
“Active ribosomes”  
—properties, 445  
Aerobic spore-forming bacteria  
—comparative ultrastructure, 346  
Aminoacyl transfer ribonucleic acid synthetases  
—role in protein biosynthesis, 264  
Animal viruses  
—mechanisms of perpetuation, 404  
Animals  
—as host for perpetuating viruses, 404  
Antibiotic blocks  
—of the ribosome cycle, 445  
Antibiotics  
—role in sporulation, 48  
Antibody site  
—localization in immunoglobulin molecule, 159  
Asporogenous mutants  
—use in studying sporulation, 48  
  
Bacilli  
—sporulation of, 48  
*Bacillus* species  
—ultrastructure of spores and vegetative cells, 346  
Bacterial extrachromosomal elements  
—genetic analysis, 210  
—recognition and identification, 210  
Bacterial flagella  
—genetics and chemistry, 454  
—growth and self-assembly, 302  
Bacterial molecular physiology  
—models, 172  
Bacterial plasmids  
—description and classification, 210  
—replication, 210  
—somatic functions, 210  
Bacteriophages  
—of *Pseudomonas*, 419  
Basidiospore germination  
—cellular features of, 505  
Biochemistry  
—of *Phycomyces*, 99  
Biological structures  
—self-assembly of, 302  
Blue-green algae  
—thermophilic species, 476  
  
Cellular motility  
—genetics and chemistry of bacterial flagella, 454  
Chemistry and genetics  
—of bacterial flagella, 454  
Chronic infection  
—for perpetuation of animal viruses, 404  
Clostridia  
—sporulation of, 48  
Complex bacteriophages  
—self-assembly of, 302  
Congenital transmission  
—role in perpetuation of animal viruses, 404  
Cytology  
—of *Phycomyces*, 99  
  
Detoxification  
—of endotoxic preparations, 72  
Dialysis  
—principles, 1  
Dialysis culture of microorganisms  
—design, theory, and results, 1  
  
Endotoxic reactions  
—molecular aspects of, 72  
Endotoxins  
—biological properties, 72  
—chemical properties and constituents, 72  
—relationship of structure to biological effects, 72  
*Enterobacteriaceae*  
—extrachromosomal elements, 210  
Eubacteria  
—sporulation in, 48  
—sporulation mutants in, 48  
Eukaryotic microorganisms  
—systems for study of morphogenesis, 505  
Exoenzymes  
—role in sporulation, 48  
Exotoxins  
—role in sporulation, 48  
Extrachromosomal inheritance  
—in bacteria, 210  
  
Fatty acids  
—possible role in endotoxicity, 72  
Fibers of muscle and connective tissue  
—self-assembly of, 302  
Fibrin clots  
—self-assembly of, 302  
Filamentous bacterial viruses  
—genetics of, 172  
—interaction between viral and host functions, 172  
—model of the molecular physiology, 172  
—physiology of infection, 172  
Flagella  
—genetics and chemistry, 454  
Freeze-etching study  
—of aerobic spore-forming bacteria, 346  
Fruiting  
—biochemical changes in, 505  
—environmental control of, 505  
—ultrastructural features, 505  
  
Gene arrangement  
—in *Pseudomonas*, 419  
Genetic recombination  
—in *Pseudomonas*, 419

- Genetics  
— of *Phycomyces*, 99  
Genetics and chemistry  
— of bacterial flagella, 454  
Germination  
— biochemical changes in, 505  
Growth response  
— in dialysis culture, 1  
Heterokaryosis  
— ultrastructure and metabolism in, 505  
Host-controlled modification  
— in *Pseudomonas*, 419  
Immunocytes  
— differentiated, 159  
Immunoglobulin molecules  
— homogeneity of, 159  
Immunoglobulins  
— primary structure of, 159  
In vitro systems  
— application of dialysis culture, 1  
In vivo systems  
— application of dialysis culture, 1  
Interaction between viral and host functions  
— of filamentous bacterial viruses, 172  
Layers outside of bacterial cell walls  
— self-assembly of, 302  
Life cycle  
— of *Phycomyces*, 99  
Light intensity  
— responses of thermophilic blue green algae, 476  
Lower animal vectors  
— for perpetuation of animal viruses, 404  
Lower fungi  
— sporulation and production of antibiotics, exoenzymes, and exotoxins, 48  
Lysosomes  
— as affected by viral development, 390  
Man  
— as a host for perpetuating viruses, 404  
Mathematical analysis  
— of dialysis culture systems, 1  
Membranes  
— self-assembly of, 302  
Messenger ribonucleic acid  
— relation to ribosomes, 445  
Microbiology  
— voices of, past, present, and future, 383  
Microorganisms  
— dialysis culture of, 1  
Microtubules  
— self-assembly of, 302  
Molecular physiology  
— of filamentous bacterial viruses, 172  
Morphogenesis  
— genetic regulation of, 505  
Motility (cellular)  
— genetics and chemistry of bacterial flagella, 454  
Mutants  
— affecting recombination, 419  
Natural populations  
— of thermophilic blue-green algae, 476  
Peptide chain elongation  
— in protein biosynthesis, 264  
Peptide chain initiation  
— in protein biosynthesis, 264  
Peptide chain termination  
— in protein biosynthesis, 264  
Perpetuation  
— of animal viruses in nature, 404  
*Phycomyces*  
— comprehensive review of, 99  
Physiology of infection  
— of filamentous bacterial viruses, 172  
Pili  
— self-assembly of, 302  
Plasmids  
— nature and role, 210  
Polyribosomes  
— from fragile cells, 445  
Product formation  
— in dialysis culture, 1  
Protein synthesis  
— mechanism of, 264  
— role in ribosome cycle, 445  
— role in viral RNA degradation, 390  
*Pseudomonas*  
— availability of mutants, 419  
— differences from other bacteria, 419  
— features of genetic interest, 419  
— genetics of, 419  
Receptor pigment  
— of *Phycomyces*, 99  
Recombination  
— bacterial mutants affecting, 419  
Replicase activity  
— at optimal and supraoptimal temperatures, 390  
Replication  
— of bacterial plasmids, 210  
Resistant virus  
— for perpetuation of animal viruses, 404  
Ribonuclease  
— origin during viral infection, 390  
Ribosome cycle  
— antibiotic blocks of, 445  
— details of, 445  
Ribosomes  
— role in protein biosynthesis, 264  
— self-assembly of, 302  
— some current ideas, 445  
— the twoness of, 445  
*Sarcina ureae*  
— ultrastructure of spores and vegetative cells, 346  
*Schizopyllum commune*  
— cytodifferentiation and morphogenesis, 505  
Secretory immunoglobulin A  
— cellular localization, 159  
— gross molecular form, 159

- Self-assembly
  - of biological structures, 302
- Sensory physiology
  - of *Phycomyces*, 99
- Short cycle
  - for perpetuation of animal viruses, 404
- Simpler viruses
  - structure and assembly of, 302
- Spherical viruses
  - structure and assembly of, 302
- Spores
  - comparative ultrastructure of, 346
- Sporulation
  - relationship to production of antibiotics, exoenzymes, and exotoxins, 48
- Sporulation mutants
  - in eubacteria, 48
  - in general and applied microbiology, 48
- Staphylococcus aureus*
  - extrachromosomal elements, 210
- Supraoptimal temperatures
  - effect on viral development, 390
- Temperature
  - responses of thermophilic blue-green algae, 476
- Thermal waters
  - distribution of, 476
  - solutes of, 476
- Thermophilic blue-green algae
  - distribution of species, 476
  - responses to temperature and light, 476
- Thermophilic cyanophytes
  - cultivation of, 476
- Toxic principle
  - for explanation of endotoxicity, 72
- Transfer ribonucleic acid
  - role in protein biosynthesis, 264
- Translation
  - mechanism in protein biosynthesis, 264
- Vegetative cells
  - comparative ultrastructure of, 346
- Viral development
  - effect of supraoptimal temperatures, 390
- Viral infection
  - fight of the organism against, 390
- Viral ribonucleic acid synthesis
  - at supraoptimal temperatures, 390
- Virion
  - of filamentous bacterial viruses, 172

# BACTERIOLOGICAL REVIEWS

VOLUME 33

BALTIMORE, MD.  
1969

COPYRIGHT © 1969, AMERICAN SOCIETY FOR MICROBIOLOGY

## CONTENTS

### NO. 1, MARCH

Dialysis Culture of Microorganisms: Design, Theory, and Results. JEROME S. SCHULTZ AND PHILIPP GERHARDT.....	1-47
Sporulation and the Production of Antibiotics, Exoenzymes, and Exotoxins. P. SCHAEFFER.....	48-71
Molecular Aspects of Endotoxic Reactions. A. NOWOTNY.....	72-98
Phycomyces. K. BERGMAN, PATRICIA V. BURKE, E. CERDÁ-OLMEDO, C. N. DAVID, M. DELBRÜCK, K. W. FOSTER, E. W. GOODELL, M. HEISENBERG, G. MEISSNER, M. ZALOKAR, D. S. DENNISON, AND W. SHROPSHIRE, JR.....	99-157

### NO. 2, JUNE

Immunoglobulins and Immunocytes. JOHN J. CEBRA.....	159-171
Filamentous Bacterial Viruses. D. A. MARVIN AND B. HOHN.....	172-209
Extrachromosomal Inheritance in Bacteria. RICHARD P. NOVICK.....	210-263
Mechanism of Protein Biosynthesis. PETER LENGYEL AND DIETER SÖLL.....	264-301
Self-Assembly of Biological Structures. D. J. KUSHNER.....	302-345
Comparative Ultrastructure of Selected Aerobic Spore-forming Bacteria: a Freeze-Etching Study. S. C. HOLT AND E. R. LEADBETTER.....	346-378

### NO. 3, SEPTEMBER

Who Speaks for Microbiology? DENNIS W. WATSON.....	383-389
Death and Transfiguration of a Problem. ANDRÉ LWOFF.....	390-403
Mechanism of Perpetuation of Animal Viruses in Nature. MINORU MATUMOTO.....	404-418
Genetics of <i>Pseudomonas</i> . B. W. HOLLOWAY.....	419-443

### NO. 4, DECEMBER

Ribosomes: Development of Some Current Ideas. DAVID SCHLESSINGER.....	445-453
Genetics and Chemistry of Bacterial Flagella. T. IINO.....	454-475
Thermophilic Blue-Green Algae and the Thermal Environment. RICHARD W. CASTENHOLZ.....	476-504
Cytodifferentiation and Morphogenesis in <i>Schizophyllum commune</i> . DONALD J. NIEDERPRUEM AND JOSEPH G. H. WESSELS.....	505-535
